Salt Lake City, Utah 84114-5801

Dear Ms. White,

On behalf of Intrepid Mining LLC (Intrepid), Shaw Environmental & Infrastructure (Shaw) submitted a "**Mine and Reclamation Plan**" for the Wendover Facility on May 9, 2008. The Mine and Reclamation Plan delineates the current and proposed mining scope as well as final reclamation activities. This document is currently in final review by the Bureau of Land Management (BLM) and the State of Utah (DOGM).

As per State requirements and follow-up discussions with DOGM, Intrepid is committed to keep the State of Utah up-dated regarding any modifications to the current Mine and Reclamation Plan. Accordingly, Intrepid is in the process of investigating and designing a new extraction well.

The new well, identified henceforth as DBW-22 (Deep Brine Well number 22), is in the final design process. The general design details of DB-22 are as follows:

- 18" Diameter casing
- ~ 1500 Feet deep
- Located adjacent to former well DBW-6 (within 200 feet)
- To be equipped with a 300 HP center lift submersible pump
- Use of the existing overhead power service
- Discharge via ~1,000 feet of 18" diameter HDPE surface piping to an existing collection ditch.

Intrepid will up-date DOGM with the final design, location, and drilling date when they are determined. Once installed, as-built documentation will be provided and included in the next term of Mine Plan revisions and bonding.
